

**BEFORE  
THE PUBLIC SERVICE COMMISSION OF  
SOUTH CAROLINA**

**DOCKET NO. 2018-319-E**

In the Matter of:	)	
	)	
Application of Duke Energy Carolinas, LLC	)	<b>DIRECT TESTIMONY OF</b>
for Adjustments in Electric Rate Schedules	)	<b>DONALD SCHNEIDER JR.</b>
and Tariffs	)	<b>FOR DUKE ENERGY</b>
	)	<b>CAROLINAS, LLC</b>
	)	

---

**I. INTRODUCTION AND SUMMARY**

1   **Q.   PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2   A.   My name is Donald L. Schneider Jr., and my business address is 400 South  
3       Tryon Street, Charlotte, North Carolina 28202.

4   **Q.   BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

5   A.   I am employed by Duke Energy Business Services, LLC (“DEBS”), as  
6       General Manager, Advanced Metering Infrastructure (“AMI”) Program  
7       Management. DEBS provides various administrative and other services to  
8       Duke Energy Carolinas, LLC (“DE Carolinas” or the “Company”) and other  
9       affiliated companies of Duke Energy Corporation (“Duke Energy”).

10  **Q.   PLEASE BRIEFLY DESCRIBE YOUR DUTIES AS GENERAL  
11       MANAGER, AMI PROGRAM MANAGEMENT, FOR DUKE ENERGY.**

12  A.   My duties and responsibilities include managing the project execution of all  
13       AMI or “smart meter” related projects for all Duke Energy jurisdictions,  
14       including DE Carolinas. I am also responsible for reporting and mapping  
15       related to AMI, as well as system integrations and upgrades involved in the  
16       control of AMI communication networks and management of AMI data.

17  **Q.   PLEASE SUMMARIZE YOUR EDUCATION AND PROFESSIONAL  
18       QUALIFICATIONS.**

19  A.   I received a Bachelor of Science Degree in Electrical Engineering from the  
20       University of Evansville (Indiana) in 1986. Upon graduation, I was employed  
21       by Duke Energy Indiana (then known as Public Service Indiana) as an

1 electrical engineer. Throughout my career with Duke Energy, I have held  
2 various positions of increasing responsibility in the areas of engineering and  
3 operations, including distribution planning, distribution design, field  
4 operations, and capital budgets. In 2006, I was named General Manager,  
5 Midwest Premise Services, responsible for managing all of Duke Energy's  
6 Midwest premise service and meter reading departments. Following this, in  
7 2008, prior to the Duke Energy/Progress Energy merger, I was promoted to a  
8 position responsible for managing the project execution for all Grid  
9 Modernization projects in the field, including both AMI and Distribution  
10 Automation devices, for all legacy Duke Energy jurisdictions. In 2012,  
11 following the Duke Energy/Progress Energy merger, I was named to my  
12 current position. Additionally, I have been registered as a professional  
13 engineer with the State Board of Registration for Professional Engineers in the  
14 state of Indiana since 1995.

15 **Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION**  
16 **OR ANY OTHER REGULATORY BODIES?**

17 A. I have not testified before this Commission; however, I have testified for DE  
18 Carolinas and Duke Energy Progress in North Carolina before the North  
19 Carolina Utilities Commission; for Duke Energy Ohio before the Public  
20 Utilities Commission of Ohio; for Duke Energy Kentucky before the  
21 Kentucky Public Service Commission; and, for Duke Energy Indiana before

1 the Indiana Utility Regulatory Commission in cases related to AMI and smart  
2 grid topics.

3 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

4 A. The purpose of my testimony is to describe the Company's progress in  
5 deploying AMI technology across its South Carolina service territory. I also  
6 highlight some of the benefits to customers of the AMI technology by  
7 providing them with greater convenience, control and transparency.

## II. AMI IMPLEMENTATION

8 **Q. WHAT IS AMI?**

9 A. AMI is the term used to refer to a comprehensive metering solution –  
10 including meters, communication devices, communication networks, and back  
11 office systems – used to create two-way communications between customer  
12 meters and the utility. It is an overall metering solution, as opposed to just a  
13 new type of meter, that allows for remote meter reading, which eliminates  
14 walk-by and/or drive-by meter reading. An AMI system consists of an  
15 advanced meter, a Field Area Network (“FAN”), and back-office systems that  
16 manage and maintain data collected from the meters. AMI meters - often  
17 referred to as smart meters - are digital electricity meters that have advanced  
18 features and capabilities beyond traditional electricity meters. Some of the  
19 advanced features include the capability for two-way communications,  
20 interval usage measurement, tamper detection, voltage and reactive power  
21 measurement, and net metering capability. Duke Energy's standard AMI

1 system utilizes a radio frequency (“RF”) mesh architecture for the FAN,  
2 which is flexible in that the meters within the mesh network establish an  
3 optimized RF communication path to a collection point either through other  
4 meters or, in some cases, through network range extenders.

5 AMI allows customers access to more detailed usage information  
6 (down to the hour) via the Duke Energy online customer portal. Regular  
7 meter reads and off-cycle meter reads (for the purpose of transferring service)  
8 can be performed remotely for customers, eliminating the need for a  
9 technician to come to the customer’s premise. Additionally, service  
10 connections and disconnections can be performed remotely for the majority of  
11 customers who are starting and/or stopping service, again, eliminating the  
12 need for a technician to come to the customer’s premise. During storm  
13 outages, damage assessment and repair verification can be done much more  
14 quickly when customers have a smart meter.

15 **Q. IS AMI TECHNOLOGY NEW TO THE STATE OF SOUTH**  
16 **CAROLINA?**

17 A. No. As noted in Appendix J of the 2016 South Carolina State Energy Plan<sup>1</sup>,  
18 AMI technology is not new to South Carolina. By 2016, each of the utility  
19 companies in the state had installed at least some AMI meters, and South  
20 Carolina’s electric cooperatives already had a 92 percent penetration of AMI  
21 metering by then.

---

<sup>1</sup> Office of Regulatory Staff, South Carolina Energy Plan (2016)

Smart Meter Penetration in South Carolina						
Utility	Total Number of Meters	Manually Read Meters	AMR Meters	AMI Meters	Number of Meters Time of Use Rate Ready	Number of Meters Implementing Time of Use Rate
SC Electric Cooperatives	756,137	-	58,412	697,726	477,402	54,035
Duke Energy Carolinas	587,976	8,806	485,119	94,051	94,051	5,609
Duke Energy Progress	172,549	2,988	161,337	8,224	8,224	4,977

<b>Total</b>	<b>2,558,183</b>	<b>115,261</b>	<b>1,587,200</b>	<b>855,345</b>	<b>629,119</b>	<b>93,191</b>

- 1 According to research by the Edison Foundation<sup>2</sup>, smart meter  
 2 installations have been growing dramatically since 2007. The figure below  
 3 projects smart meter deployment will reach 90 million by 2020.

As shown in Figure 1, smart meter installations have grown dramatically since 2007. As of year-end 2016, electric companies had installed 72 million smart meters, covering more than 55 percent of U.S. households. Based on survey results and approved plans, estimated deployments are expected to reach 76 million smart meters by the end of 2017 (covering 60 percent of U.S. households) and 90 million by 2020.

**Figure 1: U.S. Smart Meter Installations Approach 76 Million; Projected to Reach 90 Million by 2020**

<sup>2</sup> Adam Cooper, Electric Company Smart Meter Deployments: Foundation for a Smart Grid (Dec. 2017)

1   **Q.   PLEASE DESCRIBE THE IMPLEMENTATION OF AMI ACROSS**  
2       **THE DE CAROLINAS SOUTH CAROLINA SYSTEM.**

3   A.   DE Carolinas had approximately 95,000 smart meters installed in South  
4       Carolina before beginning its full deployment in 2016. As of September 30,  
5       2018, DE Carolinas installed approximately 590,000 smart meters in its South  
6       Carolina service territory and deployment is essentially complete. As  
7       described below, the Company has begun to offer new customer services and  
8       programs enabled by the AMI meter.

9   **Q.   IS THERE AN ALTERNATIVE SOLUTION FOR CUSTOMERS WHO**  
10       **DO NOT WISH TO HAVE A SMART METER?**

11   A.   Yes. The Commission approved Rider MRM, Manually Read Meter Rider, on  
12       November 17, 2016 (hereinafter the “Opt-Out Program”), which addresses the  
13       customers who have objected to the installation of a smart meter. The  
14       Company began enrolling customers in the opt-out program in November  
15       2017, after the completion of necessary IT system changes. DE Carolinas has  
16       been reaching out to the customers who objected to AMI meter installation,  
17       and has enrolled 417 customers in the opt-out program through the end of  
18       September 2018.

1   **Q.     ARE COSTS FOR THE AMI IMPLEMENTATION INCLUDED IN**  
2       **THIS RATE CASE?**

3   A.    Yes.   The Company is seeking recovery of the financial effects of the  
4       depreciation of AMI meter deployment, the carrying costs on the investment,  
5       and the carrying costs on the deferred costs, which were deferred into a  
6       regulatory asset account approved by this Commission, in Docket No. 2016-  
7       240-E<sup>3</sup>, and discussed in detail in Witness Smith's testimony.

**III.   AMI BENEFITS TO CUSTOMERS**

8   **Q.     HOW WILL THE AMI IMPLEMENTATION DIRECTLY BENEFIT**  
9       **THE COMPANY'S CUSTOMERS?**

10  A.    The AMI technology is customer-focused; it enables greater convenience,  
11       control and transparency over a customer's energy consumption.  Customers  
12       with smart meters have access to detailed information about their hourly and  
13       daily usage patterns through the Duke Energy online customer portal so they  
14       can make more informed choices regarding how they use energy.  With the  
15       capability to record interval usage data, smart meters are a foundational  
16       technology that can enable new rate designs, as referenced in Witness Pirro's  
17       testimony.  Likewise, this additional data, combined with the new Customer  
18       Connect System, referenced in Witness Hunsicker's testimony, will lead to

---

<sup>3</sup> *Petition of Duke Energy Carolinas, LLC for an Accounting Order to Defer Certain Costs Related to Advanced Metering Infrastructure (AMI)*, Docket No. 2016-240-E, Order No. 2016-489 (July 12, 2016).

1 expanded options and flexibility in supporting enhanced customer services  
2 and programs.

3 All customers receiving smart meters will benefit from the greater  
4 convenience that enables DE Carolinas to perform regular meter reads and  
5 off-cycle meter reads remotely. Additionally, with the remote disconnect and  
6 reconnect capability of AMI meters, customers who become eligible for  
7 disconnection for non-payment will have power restored more quickly  
8 through the remote reconnect capability, than they would if DE Carolinas had  
9 to send a technician on site.

10 Finally, smart meters will be integrated into Company efforts to  
11 increase communications with customers about outages and restoration  
12 timelines. DE Carolinas will have the capability to interrogate individual  
13 smart meters or masses of smart meters to determine if customers have power.  
14 During the damage assessment phase of a storm, the mass meter interrogation  
15 capability allows the Company to have a better view of where outages are  
16 located on the system. This functionality helps reduce the assessment time,  
17 thus reducing outage durations for customers. During the power restoration  
18 phase of a storm, the capability of mass meter interrogation enables the  
19 Company to determine whether power has been restored to each meter before  
20 leaving an area. For example, before the AMI deployment, if the Company  
21 restored power to a circuit that was experiencing an outage, DE Carolinas did  
22 not know whether each individual home had been restored along that circuit.

1 It could happen that power is restored to nearly all of the homes along the  
2 circuit, but that one or two homes continue to be without service due to some  
3 other individual issue. The Company formerly had no way of knowing if this  
4 has occurred until the customer notifies DE Carolinas that they are still  
5 without service, and by that time, the Company's crew may have moved on to  
6 a new area. Smart meters allow the Company to know whether individual  
7 customers are back in service before the Company moves on. And lastly,  
8 during the cleanup phase of a storm, when the Company is clearing out single-  
9 outage tickets, the capability of interrogating individual meters can tell the  
10 Company when customers power has already been restored, saving a truck roll  
11 to confirm power has been restored.

12 **Q. HAS THE COMPANY ASSESSED WHETHER THE DEPLOYMENT**  
13 **OF AMI TECHNOLOGY HAS RESULTED IN A POSITIVE IMPACT**  
14 **ON ITS COSTS?**

15 A. Yes, the Company has estimated costs it otherwise would have incurred but  
16 for the deployment of AMI for calendar years 2016 and 2017. Deployment of  
17 AMI has enabled the Company to fulfill customer orders for connection,  
18 disconnection, and reconnection remotely rather than by conducting field  
19 visits. The Company estimates the costs it avoided due to remote customer  
20 order fulfillment were approximately \$167,000 in 2016 and \$540,000 in 2017.  
21 The Company has also estimated operational savings in costs it otherwise  
22 would have incurred for monthly meter reading. Deployment of AMI

1 technology now enables the Company to read meters remotely, reducing  
2 manual and drive-by meter reading costs. The Company estimates the costs it  
3 avoided due to the ability to read meters remotely each month were  
4 approximately \$273,000 in 2016 and \$524,000 in 2017.

5 **Q. PLEASE DESCRIBE THE NEW CUSTOMER PROGRAMS ENABLED**  
6 **BY AMI.**

7 A. There are three new customer programs now available to DE Carolinas  
8 customers with AMI. Pick Your Due Date allows eligible customers to select  
9 their desired billing due date from the 1<sup>st</sup> to the 31<sup>st</sup> of the month, better  
10 aligning with customer's needs. Usage Alerts provides eligible customers  
11 with an alert at the midpoint of their billing cycle showing their accumulated  
12 charges and forecast of their month-end bill. Usage Alert customers can  
13 customize their experience by choosing to receive threshold alerts that notify  
14 them when their charges are approaching or exceeding their monthly budget,  
15 allowing customers the opportunity to adjust their energy consumption before  
16 the end of a billing cycle. Usage Alert customers can further set and change  
17 their alert preferences in the Usage Alert Dashboard and set a budgeted dollar  
18 amount and change their alert channel to text message.

19 The third program is the Prepaid Advantage ("Prepaid Advantage")  
20 Pilot program (the "Pilot"), which the Commission initially approved in  
21 Docket No. 2015-136-E on May 12, 2015 and for which it granted extensions  
22 on June 21, 2017, December 20, 2017 and June 7, 2018. Prepaid Advantage

1 allows eligible customers greater payment flexibility, allowing frequent cash  
2 payments which may help customers better manage their finances. Prepaid  
3 Advantage does not require a deposit fee, allowing customers to use funds to  
4 which they otherwise would not have access. Additionally, if a Prepaid  
5 Advantage customer is disconnected for a negative balance, no reconnection  
6 fee is charged. Prepaid Advantage is designed to give customers the control  
7 and flexibility to make payments to their account before using electricity.  
8 Customers are able to view usage and account balance information via the  
9 Prepaid Advantage Customer Portal (using desktop computer or smart phone),  
10 and receive alerts through text messages, e-mail, or automated voice, at their  
11 discretion. Customers are able to use this information to recognize higher  
12 than usual electricity consumption on a daily basis, thereby better  
13 understanding what drives their costs.

#### IV. PREPAID ADVANTAGE PROGRAM

14 **Q. WAS THE PREPAID ADVANTAGE PILOT PROGRAM A SUCCESS**  
15 **FROM THE COMPANY'S PERSPECTIVE?**

16 A. Yes. The Pilot has been a success. To inform future offerings, Duke Energy  
17 sought to achieve the following milestones with the Pilot: 1) validate that the  
18 Prepaid Advantage technology and data exchanges work as designed and meet  
19 the needs of customers; 2) measure and track participant data, behavior and  
20 satisfaction to evaluate the need and feasibility to expand the Program; and 3)  
21 test the Program's overall ability to give customers the choice, control, and

1 flexibility to pay, in real time, for electricity. The Company successfully  
2 achieved these milestones and shared its findings with the Commission in its  
3 PrePaid Advantage SC Learnings Report filed on August 21, 2017 in Docket  
4 No. 2015-136-E. Currently, over 3,000 customers are enrolled in the Pilot and  
5 Duke Energy continues to receive positive customer feedback.

6 **Q. IS THE COMPANY SEEKING TO REMOVE PREPAID ADVANTAGE**  
7 **FROM PILOT STATUS AND MAKE IT AN OFFERING TO ALL**  
8 **ELIGIBLE CUSTOMERS?**

9 A. Yes. In this proceeding, the Company has proposed to open Prepaid  
10 Advantage as of June 1, 2019 for all eligible customers, remove it from pilot  
11 status, remove the customer cap and make the program available to customers  
12 across its entire DE Carolinas jurisdiction. The proposed tariff is discussed  
13 and attached as an exhibit to Witness Wheeler's testimony. Once Prepaid  
14 Advantage has been commercialized, the Company plans to market it to  
15 eligible customers through direct mail, other direct channels, as well as  
16 through Customer Care Operations. Eligible residential customers must make  
17 an initial payment of at least \$40 and may not have a past due balance in  
18 excess of \$500. No credit check or deposit is required while a customer is a  
19 program participant, and there are no minimum payment requirements once  
20 the initial deposit amount is met. However, should the customer exit the  
21 program and return to a traditional billing schedule, a deposit may again be  
22 required. The Company will allow customers with outstanding balances

1 below the maximum to participate and will apportion 25 percent of a given  
2 payment amount to outstanding balances, and 75 percent to fund ongoing  
3 usage.

4 Based on the amount of electricity used by customers, their Prepaid  
5 Advantage balance decreases from the amount paid. The dollar amount used  
6 will be calculated based on a daily meter reading. At the end of the monthly  
7 billing cycle, there will be a once-a-month true-up to reconcile the amount  
8 applied toward usage and the bill amount. This true-up ensures that customers  
9 neither underpay nor overpay for the cost of energy used under the applicable  
10 rate schedule which is designed on a monthly, rather than daily, basis. The  
11 amount of any adjustment will be shown on the Prepaid Advantage usage  
12 statement on the Prepaid Advantage Customer Portal. Customers may  
13 continue to pay through available channels at any frequency and amount they  
14 choose.

15 If the Commission approves the Company's request to establish a fee-  
16 free credit/debit card program for residential customers, as described in the  
17 pre-filed direct testimony of Witnesses Ghartey-Tagoe and Smith, all  
18 credit/debit card payment fees for eligible residential customers enrolling in  
19 Prepaid Advantage will be waived. Alternatively, if the Commission does not  
20 approve the Company's request to establish a fee-free credit/debit card  
21 program, the Company will waive only the first credit card fee per month for  
22 residential customers on PrePaid Advantage.

1 Customers will receive alerts, including payment confirmations,  
2 current account balance, estimated days of power remaining and disconnect  
3 notices, among other communications. These alerts will be sent through the  
4 channels the customer has indicated a preference for, including text message,  
5 e-mail, and/or automated outbound calls. The Company will require a  
6 minimum number of alerts of a declining account balance, when the customer  
7 has five, three and one day remaining, for example. The customer may also  
8 view all of this information in the Prepaid Advantage Customer Portal.

9 Customers will have access to the Prepaid Advantage Customer Portal  
10 where they can access information, such as their energy usage and choose on-  
11 going communications preferences. Specifically, they will have access to:

- 12 • Reports (view account balance, meter read and status, notification  
13 status, usage statement)
- 14 • Usage (view consumption and dollars remaining)
- 15 • Notifications (choose channels, times, frequency, etc.)
- 16 • Payments (select and pay by bank account, credit card, check, etc.)
- 17 • Autopay (opt-in for auto-refill account balance when estimated 2 days  
18 remaining)
- 19 • Balance information (view account balance, meter #)
- 20 • Support information (contacts)
- 21 • Usage at a glance (deferred balance, average daily consumption, past  
22 payment)

- Meter status (connected, disconnected)
- Usage info (statement snapshot, recent usage)

**Q. DOES THE COMPANY ANTICIPATE SAVINGS TO CUSTOMERS DUE TO THE COMMERCIALIZATION OF PREPAID ADVANTAGE?**

A. Yes. The Company anticipates certain cost savings for customers around deposit fees, usage reduction and reconnect fees. For example, 22 percent of start service traditional billing customers are assessed an average one-time deposit of \$208, based on their financial history. A Prepaid customer, however, is not assessed a deposit when starting service with Duke Energy.

Moreover, a Prepaid customer reduces their usage on average by five to ten percent, compared to before they had enrolled in the Program. This correlates almost directly to a five to ten percent reduction in the customer's monthly bill. Furthermore, if a traditional billing customer experiences a disconnect, they would incur a \$15 reconnect fee. On Prepaid Advantage, no reconnect fee is assessed. To date, Prepaid Advantage customers have benefited from 10,581 free reconnects, which translates to customer savings of approximately \$158,715.

## **V. CONCLUSION**

**Q. DOES THIS CONCLUDE YOUR PRE-FILED DIRECT TESTIMONY?**

A. Yes.
